

Mounting Instructions

Task Lighting Using Rails

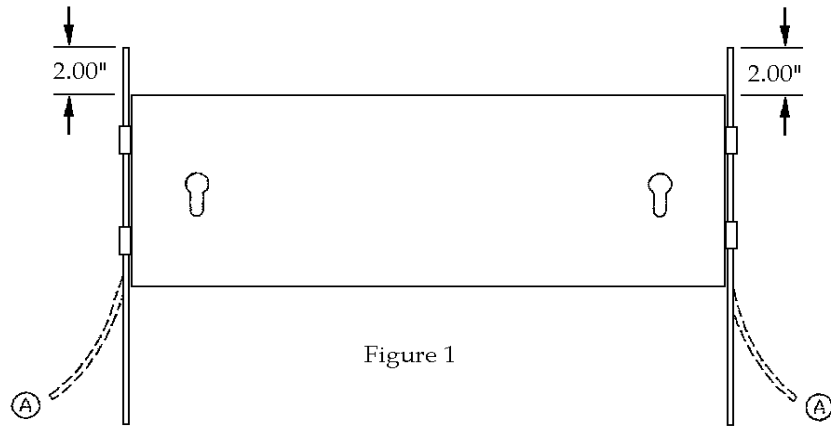

Figure 1

~ Installation ~

1. Insert mounting rails into lance tabs on both ends of the light so approximately 2" of rail extends out beyond the rear of the fixture. (See Figure 1)
2. Rest the back of the mounting rails on the rear lip of shelf.
3. Bend front of mounting rails outward (Position A) and push light up against the shelf, then release rails under front lip of shelf.
4. The light is now mounted. It can be moved left or right and front to back depending on personal preference.

Note:

If your light is furnished with cord manager clips, place them along the side of the panel you wish to run the cord and clip cord into them.

"Caution"

- ~ Injury to persons and damage to the light and/or mounting surface may result if the light is pulled from the surface,
- ~ Always mount light only to a surface that is mechanically sound to reduce likelihood of such injury or damage.
